SUMMARY

Final-year Computer Networks student at UIT-VNU seeking a **Fullstack Intern** role. Experienced in developing React/TypeScript frontends and Django + FastAPI microservices backends; skilled in containerizing with Docker, deploying to AWS/GCP and Kubernetes via CI/CD pipelines.

EDUCATION

University of Information Technology, VNU-HCM

B.Eng. in Computer Networks and Data Communications

– GPA: 8.75/10.00

Ho Chi Minh City, Vietnam

2023 – Expected 2027

AWARDS

Encouragement Scholarship for Academic Excellence

- Semester 1, 2023 – 2024
- Semester 1, 2024 – 2025
- Semester 2, 2024 – 2025

PROJECTS

MLOps PaaS System | GitHub | *React, TypeScript, Django, FastAPI, Redpanda, PostgreSQL, Docker, AWS, Kubernetes, GitHub Actions, Argo CD* 3/2026 – Present

- Architected an end-to-end MLOps platform featuring a modular React/TypeScript dashboard backed by a Django REST control plane and FastAPI serving engines, orchestrating multi-tenant model training, versioning, and real-time drift tracking.
- Developed dynamic multi-step training/deployment workflows, data-dense tables, and responsive forms using Tailwind CSS, Radix UI primitives, React Hook Form, and Zod; leveraged TanStack Query for server-state caching, mutations, and automatic background sync.
- Built the Django REST Control Plane modular monolith to manage tenant isolation, project catalogs, and immutable registries, dispatching async training, packaging, and drift jobs via Celery and Redis.
- Engineered the FastAPI Data Plane inference gateway to route predictions to isolated model workers, streaming inference telemetry into Redpanda topics for real-time Evidently AI drift detection.
- Enforced role-based access control (RBAC) and dual-token JWT authentication with Axios auto-refresh interceptors; containerized services with Docker and deployed resilient workloads to Kubernetes on AWS with GitHub Actions and Argo CD.

SageLMS | GitHub | *React, TypeScript, Spring Boot, FastAPI, LangChain, PostgreSQL, Redis, Docker, GCP, Kubernetes, FluxCD* 4/2026 – 6/2026

- Developed Spring Boot microservices for course management; built RESTful APIs via Spring MVC, handled PostgreSQL persistence with Spring Data JPA, and secured services using Spring Security JWT and RBAC propagated through Spring Cloud Gateway.
- Built the client-facing exam and challenge interface in React/TypeScript, implementing countdown timers with automatic submission, local-storage draft autosave to prevent data loss, instant question review, and dynamic leaderboards.
- Engineered an AI Tutor microservice with FastAPI, LangChain, and Google Gemini; orchestrated inter-service REST calls to dynamically inject course/challenge context into prompts, paired with a multi-session chat UI supporting full conversation history.
- Ensured code reliability with unit and integration tests across Vitest, JUnit, and pytest; containerized services with Docker and automated GitOps deployments to GKE using GitHub Actions and FluxCD with strict security quality gates.

RESEARCH

CSoNet 2026: A Drift-Aware MLOps Framework for Multi-Model Serving: A Network Intrusion Detection Case Study

Preview

- First author; proposed a cloud-native MLOps framework with decoupled control/data planes for multi-model lifecycle management; drift-triggered retraining on CIC-IDS2017 recovered Macro-F1 from 0.13–0.46 to 0.98–1.00 ($\Delta+0.54\text{--}+0.87$).

TECHNICAL SKILLS

Languages: JavaScript/TypeScript, Java, Python, SQL, Bash

Frontend: ReactJS, Tailwind CSS, Radix UI, Ant Design

Backend & APIs: RESTful APIs, Django, FastAPI, Spring Boot, Celery

Databases & Storage: PostgreSQL, MongoDB, Redis, Redpanda/Kafka, S3/MinIO

Cloud & DevOps: Linux, AWS, GCP, Docker, Terraform, Ansible, Kubernetes, Helm, GitHub Actions, Argo CD

Core Concepts: Git, OOP, TCP/IP, RBAC, JWT/OAuth, Microservices Architecture
