

Bui Ngoc Thai

DevOps Intern | Automation, CI/CD & Cloud Infrastructure

📍 Ho Chi Minh City, Vietnam | ✉ 23521412@gm.uit.edu.vn | ☎ (+84) 346 072 516 | 🌐 github.com/Nashitaz13 | [in linkedin.com/in/nashitaz13](https://www.linkedin.com/in/nashitaz13)

SUMMARY

Final-year Computer Networks and Data Communications student with an automation-first mindset and interest in DevOps, CI/CD, and cloud infrastructure. I enjoy turning manual setup and deployment steps into repeatable scripts, pipelines, and documented workflows while troubleshooting issues across Linux, networking, and Kubernetes-based environments.

EDUCATION

University of Information Technology, VNU-HCM

Expected Graduation: 2027

Major in Computer Networks and Data Communications | Final-year student | GPA: 8.33/10

PROJECTS

Drift-Aware MLOps Framework for Multi-Model Serving — Research & Prototype

Under Review | LNCS/Springer

- Co-authored a research paper formalising a drift-aware MLOps lifecycle with a tenant-aware control-plane/data-plane split, a Native Model Registry backed by PostgreSQL, and an adaptation policy π that maps feature-level drift scores to review-driven retraining triggers.
- Implemented the prototype on K3s/AWS: Django/DRF control plane, FastAPI dynamic prediction endpoints, asynchronous Redpanda log streaming, Evidently AI drift reports, Argo Workflows + Kubeflow PyTorchJob training orchestration, and Karpenter node autoscaling.
- Validated via offline multi-level replay on CIC-IDS2017 across 9 scenarios (3 attack families $\times$ 3 severity levels), repeated over 5 random seeds ($\text{std} \leq 0.004$). Post-hoc Bonferroni and BH corrections verified no drift decision changed. Retrained challengers recovered $\Delta\text{Macro-F1}$ by +0.54 to +0.87 depending on severity.

NT531 EKS Cilium vs kube-proxy Benchmark

[GitHub: daithang59/NT531_EKS-Cilium-Kubeproxy-Benchmark](#)

- Evaluated Kubernetes Service datapath performance across 2 modes, 3 scenarios, and 3 calibrated load levels by running Fortio benchmarks on AWS EKS.
- Analyzed p99 latency, RPS, error rate, 95% confidence intervals, and repeatability CV%, supported by Prometheus/Grafana metrics and Hubble flow evidence.

SageLMS – DevSecOps CI/CD & Microservices Learning Platform

[GitHub: daithang59/sagelms](#)

- Supported DevSecOps CI/CD workflows for a microservices-based SageLMS platform, including PR validation, Docker image builds, Trivy scans, SBOM generation, Harbor push, and GitOps deploy PRs.
- Documented and validated container supply-chain evidence, including image tags/digests, Trivy reports, CycloneDX SBOMs, Harbor pull secret flow, and Cosign verification logs.

MentorMe Mobile App – Mobile & Backend Integration Project

[GitHub: kaing615/MentorMe-Mobile-App](#)

- Contributed to a full-stack mentoring platform across 3 components: Android Jetpack Compose app, Express/TypeScript backend, and React Admin dashboard.
- Supported team development across Android, backend, and admin modules using Gradle/npm build scripts, TypeScript checks, Swagger API docs, Android test structure, and PR-based Git workflow.

TECHNICAL SKILLS

- **Programming/Scripting:** Python, Bash, PowerShell, Java, TypeScript, Kotlin, C/C++
- **DevOps & CI/CD:** Git, GitHub Actions, Jenkins, Docker, Docker Compose, Kubernetes/K3s, Argo CD
- **Cloud & Infrastructure:** AWS EC2/S3/IAM/OIDC, Terraform, Helm, Linux, Nginx, Cloudflare
- **Monitoring & Testing:** Prometheus, Grafana, API smoke testing, Locust, integration testing, benchmark automation
- **Networking & Databases:** OSI model, DNS, DHCP, firewall concepts, PostgreSQL, MongoDB, Redis
