

TRẦN NGUYỄN VIỆT HOÀNG

0828 552 878 | tnvhoang2005@gmail.com | github.com/Viet-Hoang-2005

PROFILE

Third-year Computer Networks and Data Communications student pursuing a **DevOps Intern** role. Interested in cloud-native platforms, infrastructure automation, CI/CD, and MLOps; built end-to-end projects spanning application delivery, Kubernetes, observability, and security.

EDUCATION

University of Information Technology, VNU-HCM

B.Eng. in Computer Networks and Data Communications

– Cumulative GPA: **8.71/10.00**

Ho Chi Minh City, Vietnam

2023 – Expected 2027

SELECTED PROJECTS

MLOps PaaS System | GitHub | *Solo Developer*

2025 – Present

- Designed and implemented a multi-tenant MLOps platform with a React dashboard, Django REST Control Plane, FastAPI model-serving gateway, PostgreSQL, Redis, Redpanda, MLflow, and S3-backed artifacts.
- Built the model lifecycle from metadata and immutable registry versions through asynchronous image packaging, deployment, endpoint health checks, inference logging, and data-drift reporting.
- Implemented local Docker execution and production-oriented Argo Workflows/Kaniko workflows for model packaging, deployment, Evidently drift runs, and KubeFlow PyTorchJob training.
- Authored AWS Terraform, Ansible, K3s/Kustomize, and Argo CD GitOps configuration; integrated Harbor, External Secrets, CloudNativePG, Prometheus/Grafana, KEDA, and Karpenter CPU/GPU autoscaling.

SageLMS | GitHub | *Spring Boot, FastAPI, GKE, Terraform*

2025

- Built a microservices-based learning platform using Spring Boot and FastAPI with a DevSecOps-oriented delivery architecture.
- Provisioned Google Cloud Platform infrastructure with Terraform and deployed the platform to a two-worker-node Google Kubernetes Engine cluster.
- Implemented CI with syntax checks, unit tests, image builds, Trivy scanning, and SonarCloud analysis; automated image publishing to Harbor and GitOps promotion through pull requests.
- Integrated CloudNativePG high availability, Cloudflare Tunnel exposure, Prometheus/Grafana observability, Kyverno image policies, Kubernetes NetworkPolicies, and Flux CD GitOps delivery.

RESEARCH & AWARDS

A Drift-Aware MLOps Framework for Multi-Model Serving: A Network Intrusion Detection Case Study

CSoNet 2026

– First author; paper is currently under review (awaiting decision).

- Encouragement Scholarship for Academic Excellence: Semester 1, 2023–2024; Semester 1, 2024–2025; Semester 2, 2024–2025.

TECHNICAL SKILLS

Frontend: React, Tailwind CSS | **Backend:** Django, FastAPI, Spring Boot | **Data:** PostgreSQL

Containers & Orchestration: Docker, Kubernetes, K3s, GKE, Argo Workflows, Harbor

Cloud & IaC: AWS (VPC, EC2, S3, EKS, Route 53, SageMaker, IAM, Secrets Manager), Terraform, Ansible

CI/CD & GitOps: Git, GitHub, GitHub Actions, Argo CD, Flux CD

Observability & Networking: Prometheus, Grafana, Cloudflare, Cisco Packet Tracer | **Tools:** VS Code
